ABSTRACT:

PURPOSE: To prevent a troublesome call by attaining talking with a predetermined specified party optionally and selectively.

CONSTITUTION: A CPU 11 starts a voice synthesizing controller 16 by a call from an opposite party at first and outputs a voice message such as 'Please tell your phone number'. A caller sends the own telephone number. A telephone controller 15 uses an opposite number identification circuit 155 to recognize the telephone number of the caller and informs the number information to the CPU 11. The CPU 11 searches whether or not the said number is registered in a telephone book file T.TBL in a main memory 12 in advance and reads a timer 21, and when the time is night, a night reception mark is added. The night reception mark is registered in the telephone book file T.TBL, and only a number having the night reception mark is received, a command is sent to a sound driver 151 from the CPU 11 to energize the sounder 19.
